

# Vulnerability Management as a Service

# The Need

60% breaches suffered by organisations were because of unpatched vulnerabilities

Average cost of security breach is £600k to £1.15million

81% of large companies reporting security breach

25,000+ new vulnerabilities disclosed in a single year

“By 2022, organisations that use the risk-based vulnerability management method will suffer 80% fewer breaches.”

– Gartner

# The Challenges

## Business

- Business risks around loss of revenue as well as reputation
- Prioritising critical business applications and processes
- Limited budget and availability concerns
- Compliance requirements

## IT

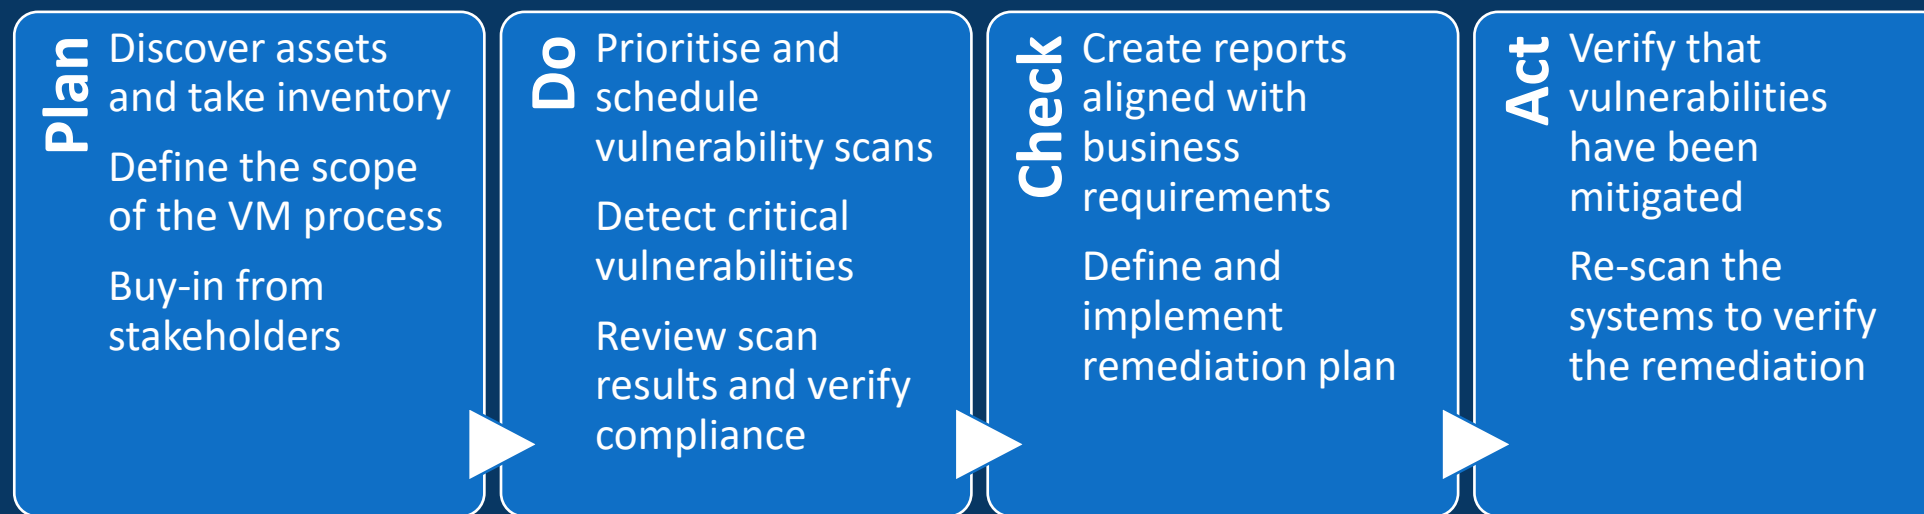

- Too many vulnerabilities to fix
- Limited resources and lack of required skillset
- Compatibility issues
- Lack of end-to-end vulnerability remediation

# The Simplex Services Framework

# The Process

Technology Agnostic | Automated | Context Aware

Qualys

HCL BigFix

PowerBI

Vulnerability discovery

Endpoint management platform

Analytics and visualization

# Value Additions

## Compliance

Gold image standards

## Resilience

Backup and archive standards

## Upgrades

Upgrade end-of-life systems and applications

## Remediation

Potential environment consolidation to save costs

## Maintenance

Monthly patching support

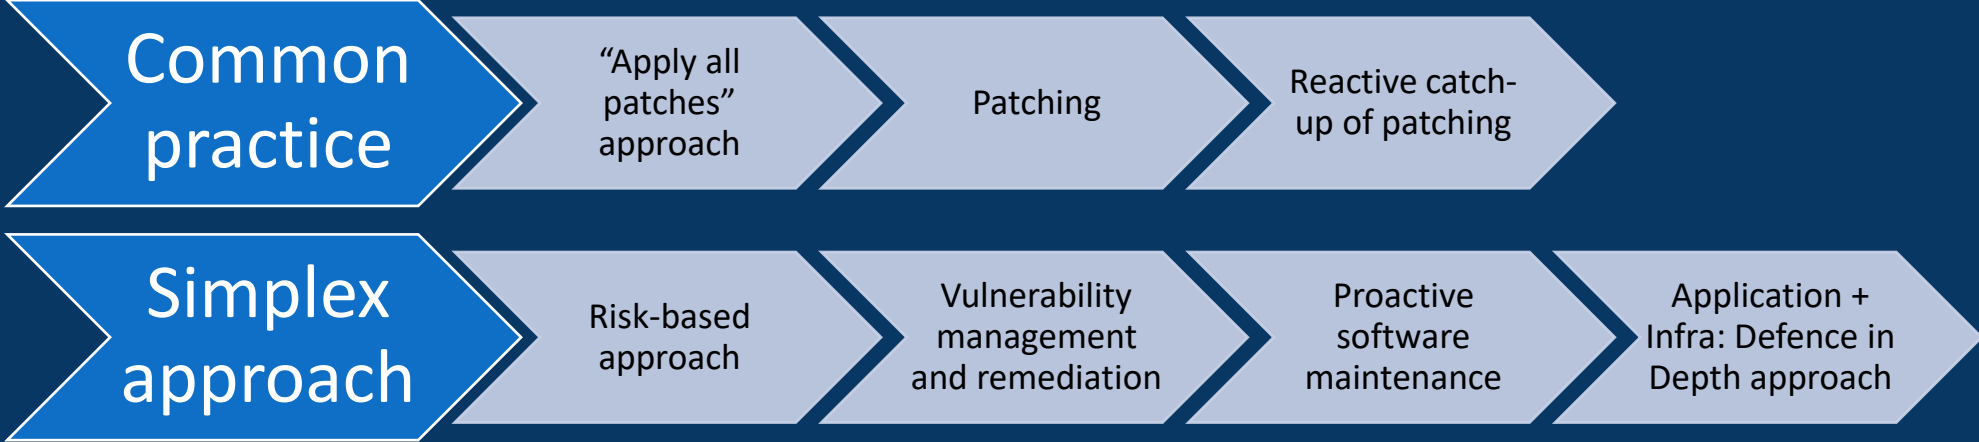

# The Benefits

Helps achieve compliance through vulnerability scanning

Delivers reports and insights about overall security posture

Predictive analysis and fixing avoids unplanned breakdowns or disruption

# Our Differentiators

# Cybersecurity Services

## Patch Management

- Helping customers verify the environment patch level and define process and strategy in patching servers/applications which will allow the organisation to utilize their existing team to secure their environment.

## VA Scan

- Helping perform VA scans as per customer needs and help them with detailed analysis to fix the vulnerabilities to ensure their environment is safe and secure.

## Security Compliance

- Helping verify customer requirements to meet IS, PCI & additional requirements and maintain the compliance.

## Infra Hardening

- Helping the customers in defining hardening policies, user access management process, and access certification procedures.
